

Small Energy Storage Power Station Investment

Why should we invest in a pumped storage power plant?

By storing energy, the pumped storage power plant will contribute to greater security of supply in southern Germany. This investment is part of our previously announced strategy to invest in growth and transformation towards a greener business.

How will a pumped storage power plant contribute to the energy transition?

The company is making a significant contribution to the energy transition and is continuing its corporate transformation towards more renewable energy generation. By storing energy, the pumped storage power plant will contribute to greater security of supply in southern Germany.

Is lithium ion the future of stationary energy storage?

The second gap involved technology. "I didn't believe lithium ion was the future of stationary energy storage," Michaelson says, referring to fixed-location energy storage systems for homes, businesses, and industrial facilities--distinct from mobile applications like electric vehicles. The third gap went deeper than business fundamentals.

Will the energy transition be a success?

The energy transition is a project that can only succeed with the cohesion of society as a whole. Everyone has set a good example and made this business investment possible. Construction work will start immediately and, if all goes well, the Happurg pumped storage plant will be back in operation in 2028. The background
