OverviewMaximum power point trackingClassificationGrid tied solar invertersSolar pumping invertersThree-phase-inverterSolar micro-invertersMarketSolar inverters use maximum power point tracking (MPPT) to get the maximum possible power from the PV array. Solar cells have a complex relationship between solar irradiation, temperature and total resistance that produces a non-linear output efficiency known as the I-V curve. It is the purpose of the MPPT system to sample the output of the cells and determine a resistance (load) to obtain maximum power for any given environmental conditions.

We'll introduce different types of solar panel wiring + break down their steps. You'll also learn what to consider before reasonable wiring.
