

# Solar panels in the south

Do solar panels work in the south?

Solar panels should work well in the South-- it has a climate marked by heat and sunshine -- but some states have yet to take advantage of the technology. While several states, such as Louisiana and Texas, land in the middle of the pack for solar installations, others, including Alabama, are nearly last.

Are solar panels worth it in South Carolina?

Most homeowners thinking of going solar know that the most significant benefit of solar panels is the savings they provide on electric bills. The average South Carolinian spends around \$147.12 per month on electricity, making South Carolina the fourth most expensive state in terms of monthly energy expenditure.

Is South Carolina a good place to go solar?

South Carolina offers more than just idyllic summer getaways -- it's also an ideal location for solar energy. With plenty of sunshine throughout the year and robust solar incentives, South Carolinians can save thousands on electricity expenses by installing solar panels on their roofs. Here's our guide to going solar in the Palmetto State.

Do solar panels work in Texas?

Solar panels like these in Austin, Texas, are part of the reason Texas has one of the highest solar adoption rates in the South. Solar panels should work well in the South -- it has a climate marked by heat and sunshine -- but some states have yet to take advantage of the technology.

Should you install solar panels in South Carolina?

Solar panels produce energy -- and, therefore, save you money -- when they absorb sunlight and convert it into electricity. As such, areas with abundant sun exposure are better suited for solar panel installation. South Carolina residents experience an average of 216 sunny days per year, which is above the national average of 205 sunny days.

Which roof is best for solar panels in South Carolina?

South-facing and west-facing roofs in the US are the best for solar panels, as they receive the most sun. Additionally, you should check your roof for shading from trees and buildings. Any sunlight obstructions can reduce your panels' efficiency and, therefore, their value. What's the Outlook on Solar in South Carolina?
