How to allow module overlapping in station planning mode?

In station planning mode at the top there is a button with gear icon, you need to choose "allow module overlap"; Thanks, I'll turn that on. I missed overlapping. Even after 600h never tried to build station without connecting modules, would be there any penalties if they will not be connected?

Which extension module is included if a redundant station Gateway pair is ordered?

If a redundant Station Gateway pair is ordered, the Extension Module EM-PC(2x) is included in the package. A separate network connection via the EM-PC is recommended for redundancy. The redundant Station Gateways are independent clients of a protection relay.

How do I connect to the station Gateway?

It is possible to connect to the Station Gateway with any ssh-client, like PuTTY. Any network interface with its corresponding IP address can be used. The firmware version can be read with StatCon Tool or via shell command. Messages from the communication software are displayed in the file /var/log/syslog.

What is a station Gateway?

The Station Gateway is designed for automation stations S7-400 and S7-400H. The PCS7 function blocks for the communication with the Station Gateway are using the system function blocks BSEND and BRCV in the S7 CPU. They are built in in each S7-400 CPU module. The communication blocks cannot be located inside a safety program.
