

Swiss high-temperature solar system

Can solar energy deliver heat at high temperatures?

Using solar radiation, they have engineered a device that can deliver heat at the high temperatures needed for the production processes. The team led by Emiliano Casati, a scientist in the Energy and Process Systems Engineering Group, and Aldo Steinfeld, Professor of Renewable Energy Carriers, has developed a thermal trap.

Can a solar receiver transmit solar energy at a high temperature?

However, this technology has difficulties transferring solar energy efficiently above 1,000 °C. To boost the efficiency of solar receivers, Casati turned to semitransparent materials such as quartz, which can trap sunlight -- a phenomenon called the thermal-trap effect.

Can solar power generate heat over 1000 degrees Celsius?

Cell Press. (2024, May 15). Scientists generate heat over 1,000 degrees Celsius with solar power instead of fossil fuel. ScienceDaily. Retrieved November 1, 2024 from [240515122039.htm](https://www.sciencedaily.com/news/240515122039.htm)

How does a thermal trap improve solar absorption?

At higher temperatures, heat loss by radiation increases and reduces the efficiency of the plants. A major advantage of the thermal trap developed by ETH Zurich researchers is that it minimises radiative heat losses. Our approach significantly improves the efficiency of solar absorption," says Casati.

What is solar blind pyrometer temperature measurement?

Solar blind pyrometer temperature measurements in high temperature solar thermal reactors (Transient radiative and conductive heat transfer in ceramic materials subjected to laser heating, Int J Thermophys, 2005, pp. 981 - 999, 10.1007/s10765-005-6679-7): a method for correcting the system-sensor cavity reflection error.

What is the Solar Technology Laboratory at PSI?

The Solar Technology Laboratory at PSI is internationally highly recognized as one of the principal players in the field of solar thermochemical process and reactor engineering. Over the past 25 years, it has demonstrated its leading role with pioneering research and numerous peer-reviewed publications.

Synhelion and Empa are conducting a joint research project, co-funded by the Swiss Innovation Agency Innosuisse, to further develop a high ...

Development of innovative elements for solar thermal energy electricity and process heat production: receivers with new thermal fluids, new types of high-temperature storage systems, ...

Using solar radiation, they have engineered a device that can deliver heat at the high temperatures needed for the production processes.

The focus on high-temperature renewable heat energy stems from several important considerations. Firstly, the urgency to mitigate climate change and reduce greenhouse gas ...

In this review article, the full scope of the development process for a solar receiver and reactor is considered, beginning with fundamental materials science and ending with large ...

Researchers at ETH Zurich have now demonstrated, in the lab, a way to make these industries independent of fossil fuels. Using solar radiation, they have engineered a ...

New applications for process heat, cooling, district heating and desalination are entering the market. Solar thermal technologies for commercial and industrial processes have remarkable ...

Lab experiments showed this innovative thermal trap can achieve temperatures up to 1050 degrees Celsius, a remarkable improvement over the previous maximum of 170 degrees ...

This study evaluates and compares several candidates for the conversion of low-temperature solar thermal energy into power and examines their technical feasibility and thermodynamic ...

Stratifiers in the space heating loop bring only a limited improvement of thermal performances if the return temperature is maintained at a low level, and this improvement tends to decrease ...

Swiss researchers have engineered a device that uses solar energy to heat to more than 1,000 C. The technology could make it possible to use solar energy to decarbonize ...

Physics Sunlight-trapping device can generate temperatures over 1000°C A solar energy absorber that uses quartz to trap heat reached 1050°C in tests and could offer a way to ...

High Temperature Seasonal BTES for Effective Load Shifting and CO2 Emission Reduction. EuroSun2018 - 12th International Conference on Solar Energy for Buildings and Industry, ...

Switzerland's mountainous terrain and dispersed Alpine communities make it difficult to have a reliable electricity supply. As a result, off-grid home solar systems offer a ...

For high-temperature industrial process heat (>500 °C), solar tower systems can supply cost-efficient and sustainable heat at temperatures even above 1,000 °C (ref. 40) but ...

Researchers at ETH Zurich have now demonstrated, in the lab, a way to make these industries independent of fossil fuels. Using solar radiation, ...

Instead of burning fossil fuels to smelt steel and cook cement, researchers in Switzerland want to use heat

from the sun. The proof-of-concept study uses synthetic quartz to ...

Study on Phase Change Materials" Heat Transfer Characteristics of Medium Temperature Solar Energy Collection System Tianqi Wang 1,2, Yingai Jin 1,2 and Firoz Alam 3,*

A solar furnace is a structure that uses concentrated solar power to produce high temperatures, usually for industry. Parabolic mirrors or heliostats concentrate light (Insolation) onto a focal point. The temperature at the focal point may reach 3,500 °C (6,330 °F), and this heat can be used to generate electricity, melt steel, make hydrogen fuel or nanomaterials.

In this work, the issues of development of high-temperature solar collectors have been discussed. The structure of a newly-developed solar collector, as well as the design ...
