

The simplest solar inverter

What is a solar inverter?

The solar inverter. It's the behind-the-scenes wizard that turns your panels' raw sunlight juice (DC power) into something your home can actually use (AC power). Pick a dud, and your solar dreams fizzle. Pick a champ, and you're golden.

How can I use a solar inverter?

To use a solar inverter, you can use any normal inverter circuit and hook it up with a solar panel. This will give you the required DC to AC output from the inverter. However, make sure to select and configure the specifications correctly to avoid damaging the inverter or causing inefficient power conversion.

Can I add solar panels later with a microinverter?

While it's easier to add solar panels to your system later with microinverters, choosing the right string inverter before your installation is critical, as central inverter systems are typically built-to-suit without the capacity for expanded solar generation. Use our online tool to find the right sizes for your solar energy system components.

What are the different types of solar inverters?

For PV installations of all sizes, there are two main types of solar inverters used today: string inverters and microinverters. While discernably different, both technologies can be effectively used to generate usable home electricity, each with its own advantages and disadvantages.

How do I choose the right solar inverter?

To find the right solar inverter or inverters for your installation, you must consider several specific features of your property, including your energy demand, roof complexity, and whether shading will affect your system's performance. Learn more about solar and shade.

How much does a solar inverter cost?

Your solar adventure starts here--let's light it up! The Enphase IQ8 is a top pick for its reliability, panel-level optimization, and 25-year warranty--especially great for shaded or complex roofs. Solar inverters cost between \$1,500 and \$5,000, depending on the type (string, micro, or hybrid) and your home's energy needs.

Solar inverters are essential components of solar energy systems, converting the direct current (DC) generated by solar panels into alternating current (AC) that can be used in ...

Without an inverter, your solar power setup is basically just a bunch of panels soaking up sunlight and not doing much else. Kind of like owning a car with no engine--the tank might be full of ...
