

# Tunisia's wind power and energy storage policy

Why is wind power important in Tunisia?

Wind power (WP) has the potential to impact the achievement of renewable energy targets due to the country's favorable geographic location. Furthermore, Tunisia has the potential to implement viable wind energy projects that satisfy fundamental economical profitability (Georgiou et al., 2008).

Can offshore wind power be used in Tunisia?

Offshore wind power has the potential to play a key role in achieving the future renewable energy targets due to the country's favorable geographic location and coastline. However, there are currently no offshore wind farm projects or experiences in Tunisia.

Does Tunisia need electricity?

Tunisia relies on imported natural gas to meet the majority of its growing electricity needs, even though the country has a vast potential to generate renewable energy. Despite limited economic growth over the last decade, peak demand for electricity has continued to grow at a high rate, around 5% per year between 2010 and 2022.

Can Tunisia export green electricity?

Exploiting its renewable energy potential will also allow Tunisia to export green electricity, including green hydrogen, contributing to the GHG emission targets of the Maghreb and Europe.

How much wind power does Tunisia need?

Tunisia's wind power market will require a relatively constant installation rate throughout the modelling period, with an average of 223 MW installed/year until 2035 and an installation rate of 300 MW/year until 2050. Tunisia's renewable potential is exceptionally diverse, and not limited to solar and wind power.

Are solar and wind power plants a viable option in Tunisia?

Consequently, renewables achieved a global market share of over 80% of all newly built power plants in 2021<sup>79</sup>. Tunisia has high-quality and substantial solar and wind resources, with either solar or wind potential alone able to cover projected electrical demand by 2050 many times over, based on GIS mapping results (projected demand in 2050:

Call for tenders for 1.7 GW of renewable energy in Tunisia. 1.1 GW of solar capacity and 600 MW of wind power will be added to the grid.

What percentage of Tunisia's electricity is renewable? In 2022, only 3% of Tunisia's electricity is generated from renewables, including hydroelectric, solar, and wind energy. While STEG ...

# Tunisia's wind power and energy storage policy

To address these challenges, Tunisia has set ambitious targets : Reducing carbon intensity by 45% by 2030 and increasing renewable energy's (RE) share to 35% of electricity production.

Tunisia is setting its sights on the future of renewable energy with plans for its first offshore wind project., this initiative signals a commitment to sustainable development and ...

The effect of seasonal energy storage for intermittent wind power is taken into account such that desalination plants can increase power consumption during cold seasons in which wind power ...

The STEG Company in Tunisia This presentation offers a comprehensive overview of the Sociéte Tunisienne de l'Electricité et du Gaz (STEG), a pivotal player in Tunisia's energy sector. We ...

EXECUTIVE SUMMARY The roadmap, the National Strategy (NS) and the Action Plan (AP) for the development of Green Hydrogen (GH 2) and its derived products in Tunisia by 2050 have ...

Tunisia's push for renewable energy reflects significant progress through ambitious solar and wind projects, yet challenges such as regulatory hurdles, financing gaps, and grid ...

Energy Storage is a new journal for innovative energy storage research, covering ranging storage methods and their integration with conventional & renewable systems. Abstract Latent heat ...

The originality of this work lies in the combination of two storage elements with different dynamics, the introduction of an adapted energy management strategy (EMS) allowing to manage energy ...

Tunisia - Tunisia, which plans to integrate 35% renewable energy into the national electricity mix by 2030 and to embed the principles of energy efficiency, would benefit from preparing the ...

The paper outlines the prevailing climatic conditions, the regulatory and legal instruments on renewables as well as national policies and strategies on the energy transition. ...

Tunisia's push for renewable energy reflects significant progress through ambitious solar and wind projects, yet challenges such as regulatory ...

Integrating wind power with energy storage technologies is crucial for frequency regulation in modern power systems, ensuring the reliable and cost-effective operation of power systems ...

Today's national installed capacity of energy storage is less than 1GW. The good news is the flexibility and diversity of energy storage technologies is set to meet the challenge: Energy ...

# Tunisia's wind power and energy storage policy

Through the TERI UMBRELLA, the World Bank has been providing technical assistance activities to support and accelerate Tunisia's energy transition, particularly to ...

ed their renewable energy potential, such as Tunisia. The objective of this report is to look into the potential of Battery Energy Storage System (BESS) development in Tunisia, in line with ...

Tunisia, a country with immense solar and wind potential, stands at a pivotal point in its energy sector. Renewable energy in Tunisia can address ...

Tunisia's Ministry of Industry, Mines and Energy has launched a tender for the construction of several large-scale PV projects with a combined capacity of 200 MW. The ...

The Tunisia 1.5°C (T-1.5oC) scenario is designed to calculate the efforts and actions required to achieve the ambitious objective of a 100% renewable energy system and to illustrate the ...

Tunisia mostly relies on gas imports to meet its primary energy needs: almost 97% of its electricity generation came from gas in 2016. However, energy policy puts the emphasis on renewable ...

Prepared in collaboration with the National Agency for Energy Conservation (ANME) and the Ministry of Industry, Energy and Mines, this assessment identifies the main challenges ...
