How did Turkmenistan gain access to the Internet?

Turkmenistan gained access to the Internet in 1997 through a contract with MCI Communications (later became MCI WorldCom). A small number of independent Internet Service Providers were forced out of business in 2001 when Turkmentelecom was granted a monopoly over data services.

Does Turkmenistan have a GSM network?

The state-owned Turkmen Telecom has been the primary provider of public telephone, email and internet services, and through a subsidiary has been operating a GSM mobile network in competition with a private mobile operator, BCTI (BCTI became MTS Turkmenistan in 2005).

Is Turkmenistan a good country for telecommunications?

Turkmenistan's telecommunications services are considered to be the least developed of all the Commonwealth of Independent States (CIS) countries. Overall, the telecom market in this predominantly rural country is relatively small but has been trying boldly to expand in recent years.

Why is the telecommunications sector important in Turkmenistan?

The improvement of the telecommunications sector is the most important aspect of the social policy carried out in Turkmenistan. Revolutionary changes in the telecommunications infrastructure of the country began already from the first days of independence.

Who controls Turkmenistan satellites?

The satellite's operations will be controlled by the state-run Turkmenistan National Space Agency (TNSA). BCTI was the only GSM operator in the country with a 10-year exclusive license granted in 1994. Due to lack of competition, BCTI continued to operate without investing much to cover rural areas.

Does Turkmenistan have Internet access?

Individual access to the Internet was first authorised in 2008, and access has since increased. Turkmenistan ranks among the most repressive and closed societies in the world. The Internet is heavily regulated and available only to a small fraction of the population. Censorship is ubiquitous and extensive.
