Who owns the power plants in Venezuela?

EDChas 11% of Venezuelan capacity, and owns the majority of conventional thermal power plants. The rest of the power production is owned by private companies.

How does Venezuela's grid work?

Venezuela's grid is based on a classic model of bulk power generation. From a centralized plant--in this case, Guri--substations transform electricity from low to high voltage so it can be transmitted all over the country and then converted back down to lower voltage for local distribution.

Why did energy production decrease in Venezuela?

These factors led to a lack of investment and maintenance in the energy sector and a deteriorating infrastructure.<sup>1</sup> As such, Venezuela's total energy production decreased by an annual average rate of 8.2% from 2011 to 2021. Petroleum and other liquids accounted for most of the energy production decrease.<sup>2</sup>

Why does Venezuela have a power crisis?

Venezuela has faced years of power instability since about 2009, including two major blackouts in 2013 and a power and water crisis in 2016. At times the blackouts were caused in part by weather conditions like El Niño, but overall they have established a pattern of poor planning, mismanagement, and lack of investment on the part of the government.

How much will Venezuela's electricity sector cost in 2020?

The IDB's 2020 report *A Look to the Future for Venezuela* estimates the cost of improvements to the electricity sector for the first five-year period at \$7.1 billion, with the minimum funds necessary for the first year estimated at \$217 million, potentially increasing to \$1 billion if funding becomes available.

How hard is it to restart a grid in Venezuela?

As it approaches a full week, Venezuela's national power outage shows just how hard it is to restart a grid from scratch. Crews attempting to deal with black-starting a frail and brittle grid like the one in Venezuela also face major safety considerations, like explosions. *MATIAS DELACROIX/AFP/Getty Images*
