

How big is Europe's energy storage capacity?

The latest edition of the European Market Monitor on Energy Storage by LCP Delta and The European Association for Storage of Energy (EASE), released today, highlights Europe's rapid expansion in energy storage capacity, which reached 89 gigawatts (GW) by the end of 2024.

Which energy storage technology is the most popular in Europe?

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade as a recent trend in the energy storage market.

Is energy storage a good investment in Europe?

Compared to classic renewables, energy storage has really only become an investable asset in Europe over the last few years on the back of technology advances, market price signals, and government support mechanisms.

How do energy storage assets make money in Europe?

For short-duration energy storage assets, there are really three key revenue streams for energy storage assets in Europe. The first one is capacity payments, which have become a broadly implemented policy measure by governments to support system reliability and incentivize the installation of certain new power asset types.

Why should you invest in battery storage in Europe?

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new opportunity for investors amid the emerging demand for battery storage, which provides balance to electricity markets.

What is the European energy inventory storage dataset based on?

Disclaimer: The European Energy Inventory Storage dataset is mainly based on public data and data from Wood Mackenzie. Wood Mackenzie Limited, subject to any additional data modifications and/or input provided by the EC or any of its authorised 3rd party contributor

Welcome to our EU Market Outlook 2025: Mid-Year Analysis. This publication marks a new addition to SolarPower Europe's solar and battery storage market outlook series. ...

Per Bloomberg, Castleton Commodities, Vitol, and Trafigura, among others, are investing in various battery storage projects across Western Europe as they try to grab a piece ...

In the future, Germany, Italy and Poland will be the hot spots in the European energy storage market. The German energy storage market is expected to ...

North-western Europe has vast, underutilised potential renewable energy in the North Sea, which is central to

decarbonisation strategies for countries in this region. Utilisation will require ...

The Association of Regulators of Western Europe (WENRA), created on 4 February 1999, [1] is an association of agencies or regulatory agencies in the field of nuclear countries of Western ...

As Europe continues its transition to a more sustainable and resilient energy system, energy storage remains a critical enabler of renewable energy ...

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new ...

It offers a comprehensive view of the continent's storage infrastructure--from pumped hydro and battery systems to emerging technologies like hydrogen and thermal storage.

Energy storage has grown exponentially in Europe in recent years - and that pace is set to continue across the continent. So, how is the market evolving, and how can industrial ...

Let's face it: Europe's energy storage game is getting hotter than a Tesla battery during peak discharge. With operated battery storage capacity now exceeding 20GW [1], the ...

In 2024, total battery storage installations in Europe went up by 11.9 GW to a total of 89 GW. Per Bloomberg, Castleton Commodities, Vitol, and Trafigura, among others, are ...

The project "Hydro Pumped Storage in Amfilochia" is the largest investment in energy storage in Greece. With a total installed capacity of 680 MW ...

On 2 July 2025, the European Commission published guidance on renewables, grid infrastructure and network tariffs. The communication aims to accelerate ...

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade ...

As Europe continues its transition to a more sustainable and resilient energy system, energy storage remains a critical enabler of renewable energy expansion. The report underscores the ...

In the future, Germany, Italy and Poland will be the hot spots in the European energy storage market. The German energy storage market is expected to grow rapidly from 8 GW in 2023 to ...

It established sale subsidiaries in many of its export markets, and also invested in access to industrial and power generation sectors in Western and Central Europe. In addition, Gazprom ...

Western European Power Storage

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. ...

The European Market Outlook for Battery Storage 2025-2029 analyses the state of battery energy storage systems (BESS) across Europe, based on data up to 2024 and ...

Research institutions across Europe are developing next-generation storage technologies, including advanced flow batteries, compressed air energy storage, and ...

Governments in Europe, North America, and Asia-Pacific have introduced tax credits, rebates, and feed-in tariff programs to encourage installation of solar panels and ...
