What is liquid air energy storage?

Liquid air energy storage (LAES) is a technology that converts electricity into liquid air by cleaning, cooling, and compressing air until it reaches a liquid state. This stored liquid air can later be heated and re-expanded to drive turbines connected to generators, producing electricity.

What is the energy storage project?

The Gilboa pumped storage power plant is an energy storage project that involves constructing a power plant to pump water from a low-level reservoir to a high-level reservoir, with a height difference of 574 meters. This environmentally friendly plant complements the unique landscape of the North of Israel.

Why is liquid air energy storage gaining traction?

Among them, liquid air energy storage (LAES) is gaining traction for its geographical flexibility and long-term potential. Promising long-lasting, long-duration energy storage (LDES) and scalability without pollution or geographic constraints, LAES was first proposed in 1977 but shelved due to technical and financial challenges.

Could liquid air unlock a new opportunity for long-duration energy storage?

The world's most available substance could unlock a new opportunity for long-duration energy storage. Liquid air refers to air that has been cooled to low temperatures, causing it to condense into a liquid state. Credit: Waraphorn Aphai via Shutterstock.

How efficient is a liquid air storage system?

The research placed the efficiency for a liquid air storage system's complete charge and discharge cycle at 20%-50%, though Highview rebutted with a 50%-60% round-trip efficiency estimation for a standalone system. Either way, LAES lags behind PSH (65%-85%) and batteries (80%-95%) in efficiency.

How can liquid air storage benefit the chemical industry?

Liquid air storage benefits from other sectors' legacy systems. Given that air-condensing technologies have been part of the chemicals industry for decades, LAES can use the industry's off-the-shelf parts, reducing infrastructure and maintenance costs, as well as build times.
