

Which brand of sine wave inverter should I use

What is the best pure sine wave power inverter?

AIMS 3000W Pure Sine Wave Power Inverter - Top Pick Protection: Overload, Short Circuit, Over/Under Voltage, And Over Temp. The AIMS 3000W model is our top pick as the best pure sine wave inverter available today. It's powerful, efficient, noiseless, and very durable too.

Why should you use a pure sine wave inverter?

Pure sine wave inverters produce stable power with low harmonic distortion you can safely use with medical equipment. Such clean power output buys you peace of mind knowing that your expensive devices are safe from power disruptions.

How does a sine inverter work?

A sine inverter takes the DC output of your solar array, converts it to AC, and does so in a way which replicates as closely as possible the pure sine wave of grid power alternating current. Moreover, pure sine wave inverters amplify the converted current to differing strengths of wattage and voltage.

Should I buy a modified sine wave inverter?

When it comes to solar array inverters, you do not want to buy a modified sine wave inverter. Contrary to pure sine wave inverters, modified sine wave inverters only attempt to mimic a sine wave, which can result in regular and bad disruptions to the grid and to your experience.

Are pure sine wave inverters safe?

With a unit as integral to the maintenance and production of your energy supply, it's important that they are as safe to use as possible. Pure sine wave inverters typically come with several in-built protection systems to ensure their own longevity, as well as the longevity and security of your solar panels and appliances.

Do you need a sine wave inverter for solar panels?

You need a pure sine wave inverter if you plan to install solar panels on your roof or RV. Most appliances in your home use AC power, so you need it to convert the DC power that solar panels produce to AC power. It also brings up the voltage to the grid level.
