

Which liquid cooling energy storage company is best in Bolivia

Why do data centres use liquid coolers?

The company's liquid coolers aim to deliver high performance whilst priding itself on its reliability. Its cooling processor innovations can enable energy-efficient data centre cooling, in addition to its liquid cooling technology being able to reuse 75% of the total energy used in data centres as 60°C (140°F) hot water.

Is data centre cooling a viable solution?

Cooling has therefore emerged as a viable solution. Put simply, data centre cooling is controlling the temperature inside the facility to reduce heat. From air cooling to liquid cooling, companies are utilising these new and improved solutions to keep equipment cool and therefore reduce energy waste.

What is liquid cooling?
