

Wide voltage charging inverter

What is the difference between a battery charger and an inverter?

The inverter converts direct current (DC) from the battery into the alternating current (AC) required by the electric motor to turn the wheels. The charger performs the same task in reverse: the AC voltage is turned into DC voltage in order to charge the battery in a hybrid plug-in vehicle or an all-electric vehicle.

How does a charge-inverter work?

This charge-inverter allows for both the slow charge and rapid charge function, at no cost, while at the same time offering significant reductions in terms of weight and size. In addition, with its unique architecture that incorporates a voltage step-up, the charger-inverter offers a very high output, and increases autonomy by around 10%.

What battery types does a hybrid inverter charger support?

It supports a maximum power of 6500W and a voltage range from 60V to 500V DC, making it highly compatible with a wide range of solar systems. Compatible with Various Battery Types: Designed for 48V battery systems, our hybrid inverter charger supports a range of battery types, including lithium, lead-acid, and custom batteries.

Why should you use a smart inverter/charger?

Our technology is built to depend on, ensuring robust performance in diverse environments. Smart, resilient inverter/chargers for off-grid, marine, mobile, backup, and energy storage--modular and configurable to fit any professional energy system.

What is the output voltage range of an 800 volt battery charger?

For an 800 V electric vehicles battery charger, which is becoming more and more popular, the output voltage range of the converter has been extended to be 100 V ~ 900 V to make it compatible with existing 400 V electric vehicle applications.
